

Namwook Lee

650-674-9901 | namwook0921@berkeley.edu | github.com/namwook0921

EDUCATION

University of California, Berkeley

Bachelor of Arts in Computer Science and Mathematics (GPA 4.0/4.0)

Leave of absence for mandatory military service, Fall 2024 – Spring 2026

Aug. 2022 – May 2028

Berkeley, CA

EXPERIENCE

Stanford Safe and Intelligent Autonomy Lab

Visiting Researcher

Jun. 2026 – Present

Palo Alto, CA / Remote

- Researched language-conditioned semantic safety for autonomous systems under the guidance of Prof. Somil Bansal and Ph.D. candidate Albert Lin.
- Developed a scalable framework that uses vision-language model feedback to learn latent safety margins and train Hamilton–Jacobi-inspired safety critics and policies via RL.
- Investigated integrating learned safety values with world-model latent representations to evaluate imagined trajectories and guide safe planning under language-specified constraints.

Optiver

Quantitative Trading Intern

Jun. 2024 – Aug. 2024

Chicago, IL

- Worked 10 weeks as a quantitative trading intern in the Optiver Chicago office.

CITRIS Invention Lab

Undergraduate Researcher

Oct. 2023 – Present

Berkeley, CA

- Developed a novel dynamic-game framework, deriving equilibrium solutions and implementing efficient iterative algorithms for nonlinear games under guidance of Prof. Claire Tomlin.
- Submitted paper to ACC L-CSS 2027.

Codebase @ Berkeley

Full Stack Developer

Jan. 2024 – May 2024

Berkeley, CA

- Built a full-stack mobile web application using **React** and **Firestore** for developing and testing prompts with Google's Gemini API.
- Implemented multimodal prompting workflows supporting **text, voice, and image** inputs for rapid experimentation with LLM applications.

PROJECTS

Dynamic Games Solver | *Reinforcement Learning, Game Theory*

May. 2025 – Current

- Developed an open-source RL framework unifying **Nash** and **Stackelberg** formulations for multi-agent dynamic games, integrating PettingZoo and PPO architectures.
- Implemented hierarchical action sequencing, equilibrium analysis, and rollout visualization to study learning stability and convergence properties.

Predicting Student Misconceptions (Kaggle) | *LLM / Data Science*

Aug. 2025 – Oct. 2025

- Ranked in the **top 17%** globally among 1,000+ teams in the *MAP: Charting Student Math Misconceptions* competition.
- Built a full pipeline integrating **Gemma-2**, **Qwen-3**, and **DeepSeek-Math** models with **LoRA fine-tuning** and disagreement-weighted ensemble blending.

AWARDS/SCHOLARSHIPS

Putnam Competition Top 300 | *Competitive Math*

Dec. 2023

- Ranked Top 300 nationally in the 84th William Lowell Putnam Mathematical Competition

USAMO Qualifier | *Competitive Math*

Mar. 2021

- Ranked Top 100 in the United States of America Mathematical Olympiad

TECHNICAL SKILLS

Languages: Java, Python, C/C++, R, JavaScript, TypeScript, CSS, React, SQL

Technical Courses: Machine Learning, Optimization, Computer Vision, Intro to Robotics, Randomness & Computation, Data Structures, Discrete Mathematics and Probability Theory, Linear Algebra, Quantum Physics
